Biology

Questions from Paper 3, Paper 4 and Paper 6

You must have: a ruler marked in centimetres and millimetres, a protractor, compasses, a pen, an HB pencil and an eraser.

Total marks

/ 89

Instructions

- Answer every question in the space provided on this paper.
- Write in black or dark blue ink. Pencil may be used for diagrams and graphs.
- Fill in your name, centre number and candidate number above.
- Show your working: a correct method can earn marks even if the answer is wrong.

Information

- This paper has 10 questions worth 89 marks in total.
- The marks for each question or part are shown in brackets, for example [3].

Advice

- Read every question through once before you write anything.
- Use the marks in brackets to judge how long to spend on each part.
- If you finish early, go back and check your working.

Print at 100% (Actual size) so diagrams keep their real measurements.

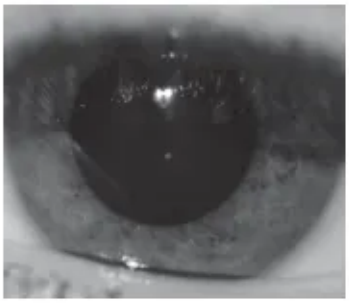

1 Fig. 3.1 shows two photographs of a person's eye.

In photograph **A** the person was looking out of a window.

In photograph **B** the person had turned away from the window.

A

B

Fig 3.1

(a) Describe what happened to the diameter of the pupil in photograph **B**.

..... [1]

(b) Explain your observation.

.....

.....

.....

.....

..... [2]

2 **(a)** Define the term sense organ.

.....

.....

.....

.....

..... [2]

(b) Fig. 9.1 is a diagram of a section of a human eye.

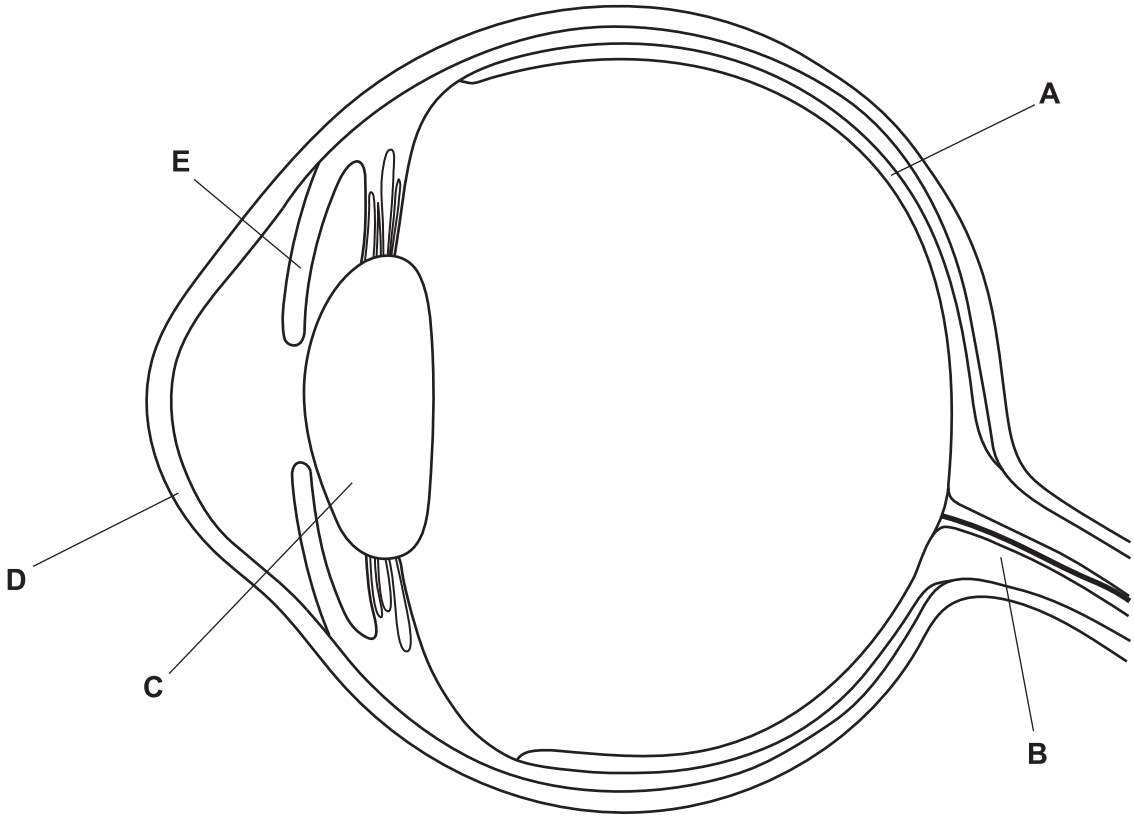

Fig. 9.1

State the letter of the structure shown on Fig. 9.1 that:

- focuses light on the light receptors .....
- refracts light .....
- controls how much light enters the pupil .....
- carries impulses to the brain .....

[4]

STEM | Exam Builder

(c) Fig. 9.2 is a diagram of an eye in a dark room and in a light room.

Draw the expected size of the pupil on the eye in the **light room** in Fig. 9.2.

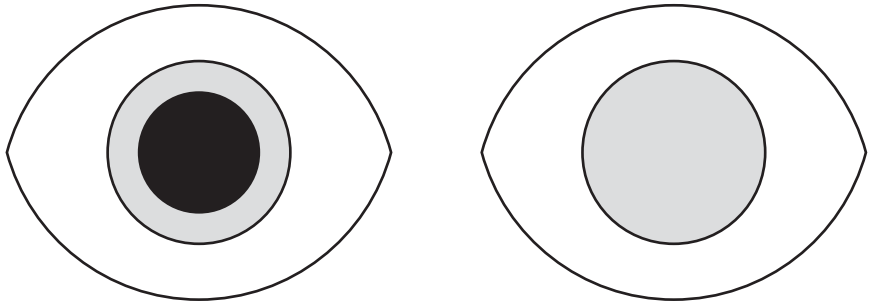

Fig. 9.2

3 **(a)** Fig. 7.1 shows the reflex arc that is involved when someone steps on a pin.

not to scale

Fig. 7.1

(i) The skin is a sense organ and can detect the pin.

State the type of stimulus that the cells in the skin are responding to.

..... [1]

(ii) Describe the reflex action shown in Fig. 7.1.

.....

.....

.....

.....

.....

.....

.....

.....

.....

..... [4]

STEM | Exam Builder

(b) The response of the pupil to changes in light intensity is also an example of a reflex action.

(i) Fig. 7.2 shows the size of the pupil in dim light.

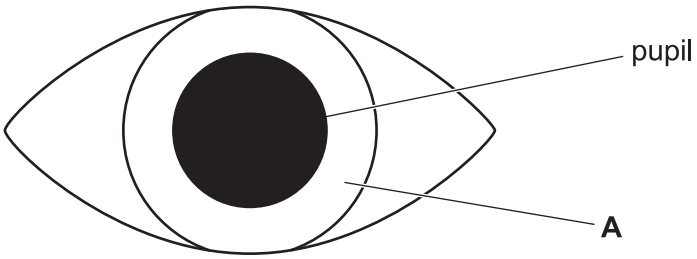

Fig. 7.2

On Fig. 7.3, draw the expected appearance of the pupil in bright light.

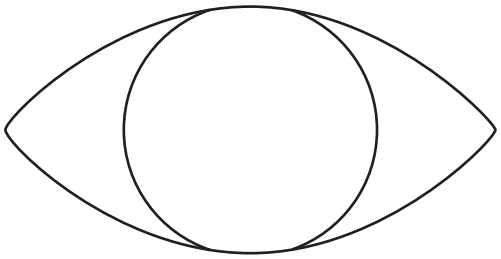

Fig. 7.3

[1]

(ii) State the name of the structure labelled **A** in Fig. 7.2.

..... [1]

(iii) State the name of the tissue in the eye that detects light.

..... [1]

[Total: 8]

4 Reflex actions play an important part in human behaviour.

(a) **(i)** What is meant by the term *reflex action*?

.....

.....

.....

.....

.....[2]

(ii) Suggest why reflex actions are important.

.....

.....[1]

(b) A reflex arc is made up of a number of different parts.

Complete the sentences that describe a reflex arc by writing the correct words in the spaces.

Each word may be used once, more than once or not at all.

brain **effector** **motor neurone** **receptors**
relay neurone **sensory neurone**

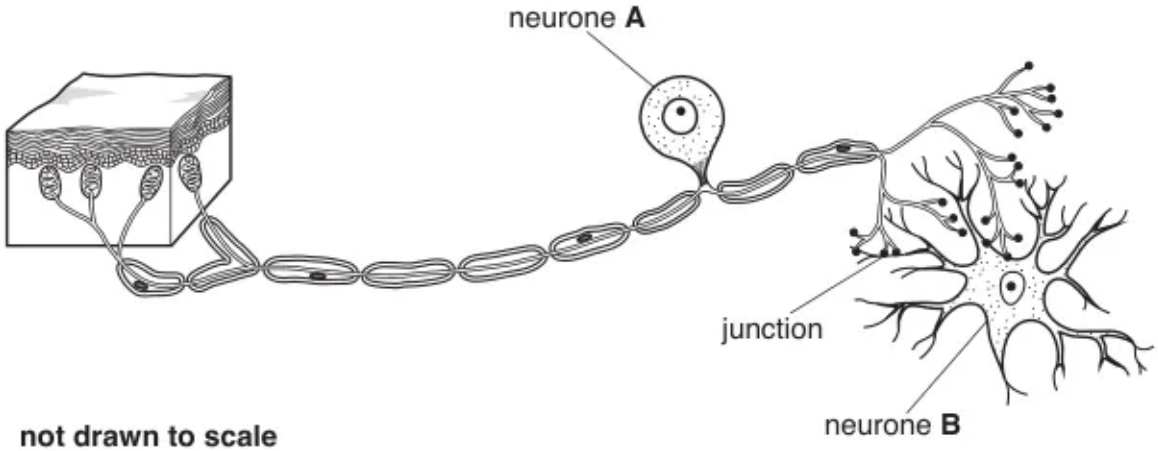

Changes in the surroundings are detected by ..... which generate an impulse in a ..... . Nerve impulses travel from this cell to a ..... . The impulses then travel to a ..... . Finally the nerve impulse is passed to an ..... which results in the body responding to the changes. [4]

STEM | Exam Build

(c) Fig. 6.1 is a diagram of a reflex arc.

It shows two different neurones.

These are labelled neurone **A** and neurone **B**.

not drawn to scale

Fig. 6.1

(i) There are small gaps at the junctions between neurone **A** and neurone **B**.

State the name of these gaps.

.....[1]

(ii) State where in the body neurone **B** can be found.

.....[1]

[Total: 9]

5 Sensitivity is one of the characteristics of all living organisms.

(a) Define the term *sensitivity*.

.....

.....

..... [2]

(b) The eye is an example of a sense organ.

(i) Define the term *sense organ*.

.....

.....

..... [2]

(ii) Adrenaline is a hormone that is released in 'fight or flight' situations. It causes a change in the eye.

Complete Table 6.1 by stating the parts of the eye that change when adrenaline is released into the blood.

Table 6.1

action	part of the eye
muscle that relaxes	
muscle that contracts	
widens	

[3]

6 Two identical potted plants were used to investigate plant responses.

Plant **A** was placed on a clinostat that continually rotated. Plant **B** was not rotated.

Both plants were then placed on their sides and kept in the dark.

Fig. 4.1 shows the two plants at the start of the experiment and after seven days.

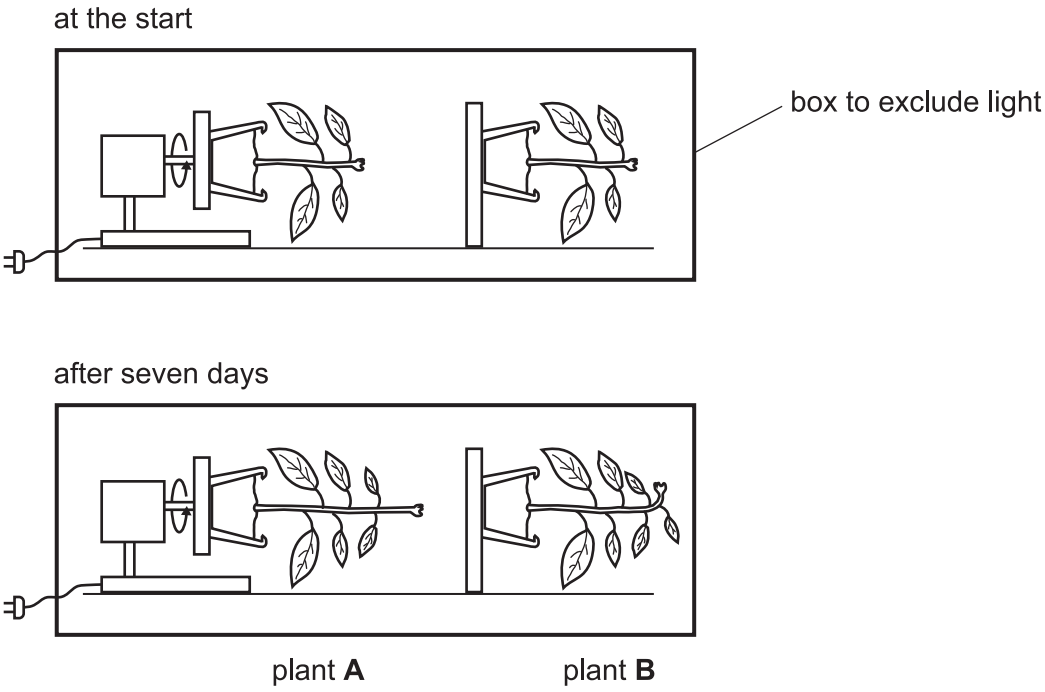

Fig. 4.1

(a) State the name of the response shown by the shoot of plant **B**.

..... [1]

(b) Explain the reason for constantly rotating plant **A**.

.....

.....

.....

.....

..... [2]

(c) **(i)** State the name of the plant hormone that causes the response of the shoot of plant **B**.

..... [1]

STEM | Exam Builder

(ii) Explain how the plant hormone causes the response of plant **B**.

.....

.....

.....

.....

.....

.....

..... [3]

(d) Seeds germinate in the soil. The seedlings that grow from seeds show the same response as shown by plant **B** in Fig. 4.1.

Explain the advantages of this response to the survival of seedlings and mature plants.

.....

7 The light sensitive cells in the eye are known as rods and cones.

Fig. 2.1 shows drawings of a rod cell and a cone cell.

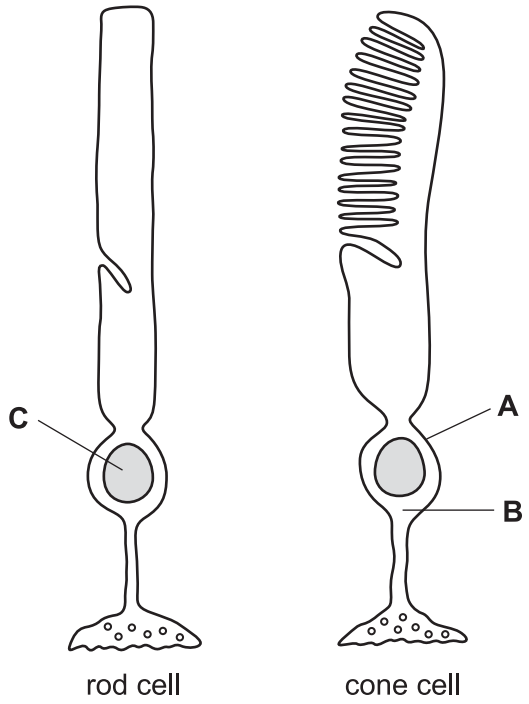

Fig. 2.1

(a) Name the structures labelled **A** to **C**.

A .....

B .....

C ..... [3]

(b) **(i)** Name the tissue in the eye where rods and cones are found.

..... [1]

(ii) Name the parts of this tissue where there are

cones but no rods .....

no cones or rods ..... [2]

STEM | Exam Builder

(c) Describe how rods and cones function.

.....

.....

.....

8 **(a)** Movement is a characteristic of living organisms.

Define the term *movement.*

.....

..... [1]

When the hand is stimulated by a hot object a reflex action occurs in which the fore-arm is raised.

Fig. 2.1 shows the muscles and the neurones involved in the reflex action.

The arrows show where there are nerve impulses during the reflex action.

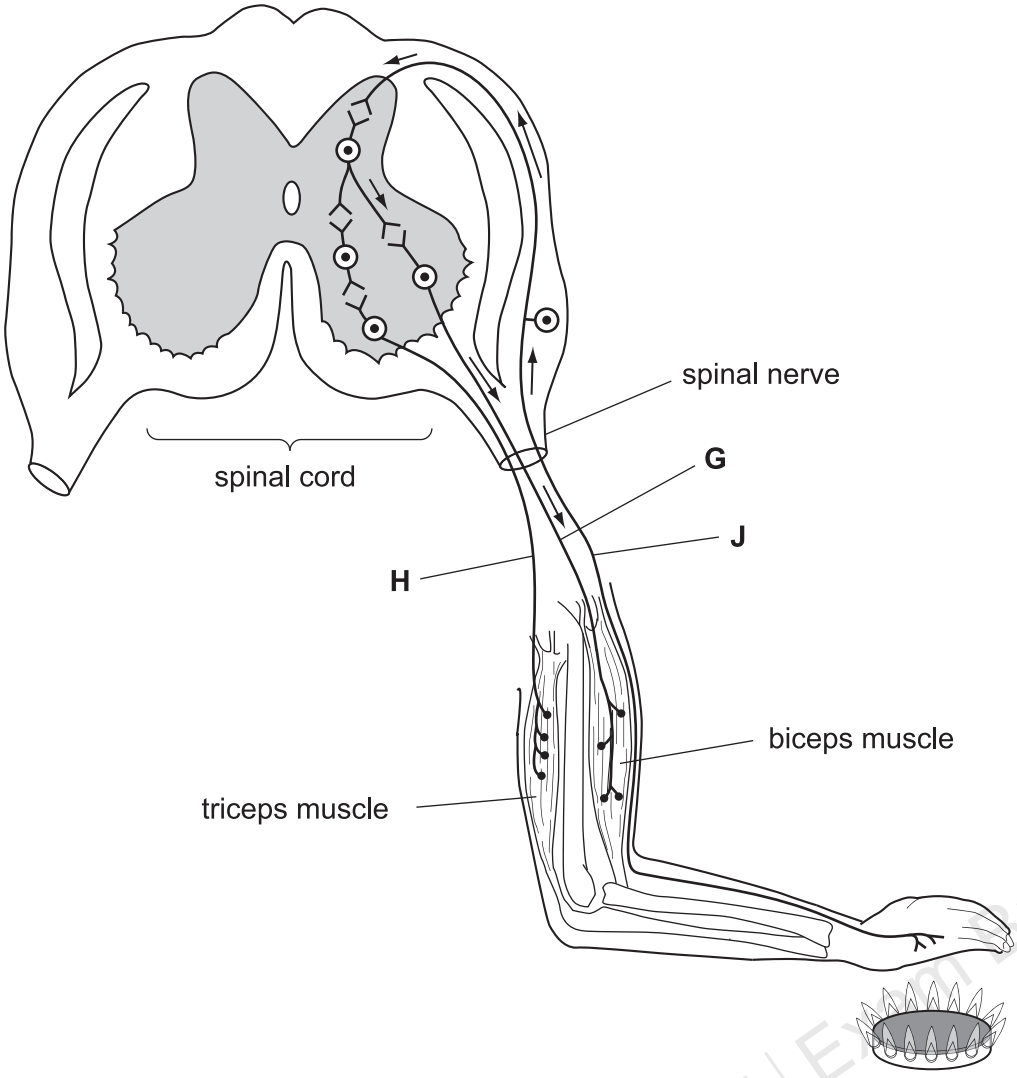

Fig. 2.1

(b) **(i)** State the name for the action of two opposing muscles, such as the biceps and the triceps.

..... [1]

STEM | Exam Builder

(ii) Explain how two opposing muscles bring about movement at the elbow joint.

.....

.....

.....

.....

.....

.....

..... [3]

(c) **(i)** Describe the function of neurone **J**.

.....

.....

.....

..... [2]

(ii) Explain why there are impulses in motor neurone **G**, but not in motor neurone **H**.

.....

.....

.....

.....

..... [2]

(d) The action shown in Fig. 2.1 is an involuntary reflex action. The muscles can also be used for voluntary actions.

Explain how muscles are controlled during voluntary actions.

.....

.....

.....

.....

..... [2]

9 **(a)** Complete the sentence about the mammalian nervous system.

The ..... nervous system consists of the brain and spinal cord and the ..... nervous system consists of the nerves outside the brain and spinal cord.

[1]

(b) Fig. 4.1 shows the parts of a reflex arc.

M	effector
N	motor neurone
P	receptor cell
Q	relay neurone
R	response
S	sensory neurone
T	stimulus

Fig. 4.1

(i) Put the parts listed in Fig. 4.1 into the correct sequence, and write the letters in the boxes.

Two have been done for you.

T						**R**

[2]

(ii) State **two** stimuli that are detected by the skin.

1 .....

2 .....

[2]

(iii) The pupil reflex controls the amount of light that enters the eye.

State the name of an effector in the pupil reflex.

..... [1]

STEM | Exam Builder

(c) Describe and explain how impulses are **only** passed in one direction from one neurone to the next.

.....

.....

.....
