Movement into and out of cells

Time allowed: 1 hour 25 minutes

Subject code **0610**

Biology

Questions from Paper 3 and Paper 4

You must have: a ruler marked in centimetres and millimetres, a protractor, compasses, a pen, an HB pencil and an eraser.

Total marks

/ 89

Instructions

- Answer every question in the space provided on this paper.
- Write in black or dark blue ink. Pencil may be used for diagrams and graphs.
- Fill in your name, centre number and candidate number above.
- Show your working: a correct method can earn marks even if the answer is wrong.

Information

- This paper has 10 questions worth 89 marks in total.
- The marks for each question or part are shown in brackets, for example [3].

Advice

- Read every question through once before you write anything.
- Use the marks in brackets to judge how long to spend on each part.
- If you finish early, go back and check your working.

STEM | Exam Builder

Print at 100% (Actual size) so diagrams keep their real measurements.

1 **(a)** Complete Table 5.1 to show which statements are true for diffusion and which are true for osmosis. Use a tick (✓) if it is true or a cross (✗) if it is false.

Complete all eight boxes.

Table 5.1

statement	diffusion	osmosis
must involve a partially permeable membrane		
involves the movement of gases and solutes		
is a result of the random movement of particles		
requires energy from respiration		

[4]

(b) Fig. 5.1 shows a small bag of coloured salts placed in a beaker of warm water.

After a few minutes, the water changes colour. This is shown in Fig. 5.1.

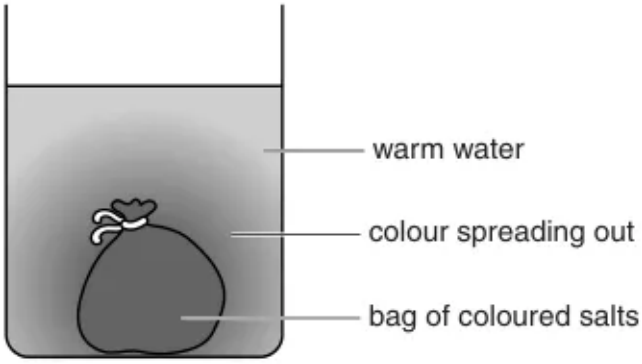

Fig. 5.1

Use Fig. 5.1 to help explain how tissues obtain oxygen from the blood.

Diffusion Click for more variations

2 **(a)** Complete Table 6.1 about diffusion and active transport.

Place a tick (✓) in each box which is correct.

Table 6.1

process	involves the movement of particles down a concentration gradient	involves the movement of particles up a concentration gradient	energy from respiration is required to move the particles
diffusion			
active transport			

[2]

(b) Complete Table 6.2 by naming the organ where each of these examples of diffusion takes place.

Table 6.2

example of diffusion	organ
oxygen passes into the blood of a human	
carbon dioxide passes into a plant	
glucose is absorbed into the blood of a human	

[3]

(c) Water moves into plant cells by osmosis.

Explain how plants benefit from the build-up of water in their cells.

4 **(a)** Water is an important biological molecule.

The box on the left contains the word 'Water'.

The boxes on the right contain some sentence endings.

Draw a line from the box on the left to each correct statement about water.

Draw **three** lines.

Water	breaks down to release energy.
	dissolves many substances.
	is a solute.
	is produced in photosynthesis.
	is required for digestion.
	is required for germination.

[3]

(b) Students investigated the movement of water in model animal cells using dialysis tubing.

Fig. 1.1 is a diagram of the apparatus used in the investigation.

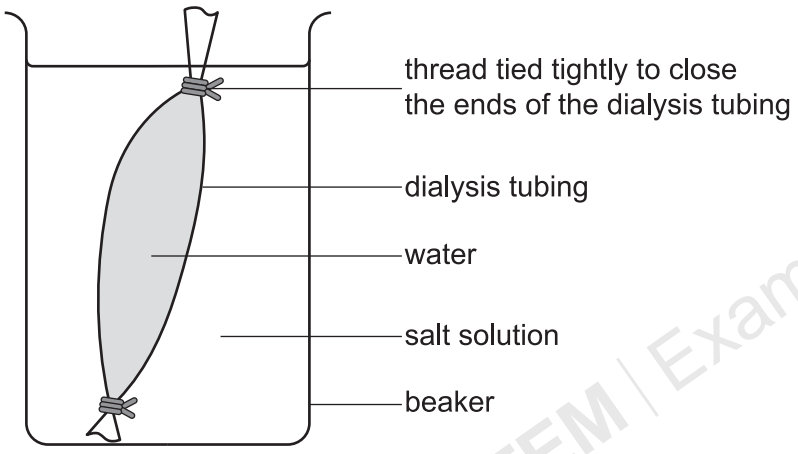

Fig. 1.1

(i) State the name of the part in Fig. 1.1 which represents:

the partially permeable membrane of an animal cell

.....

the cytoplasm of an animal cell.

.....

[2]

(ii) Draw an arrow **on Fig. 1.1** to show the direction of water movement during the investigation.

[1]

(iii) State the name of the process of water diffusing across a partially permeable membrane.

..... [1]

(c) Animal cells placed in pure water will burst.

State the structure that prevents a **plant** cell from bursting when it is placed in pure water.

..... [1]

(b) The ratio of the surface area to the volume of a cell affects the rate of diffusion of a substance into the cell.

The results of an investigation on diffusion into a cube-shaped cell are shown in Table 9.1.

(i) Complete Table 9.1. One of the rows has been done for you.

Table 9.1

length of side of cube /mm	time taken for substance to diffuse to centre of cell /s	surface area of cube /mm^2 (total of 6 sides)	volume of cube /mm^3	surface area to volume ratio
1	20	6	1	6:1
2	41			
3	76			

[2]

(ii) Suggest how surface area to volume ratio affects the efficiency of diffusion.

.....

.....

.....[1]

(c) Explain **one** way that the lungs of a mammal are adapted to increase the rate of diffusion of oxygen from the alveoli to the blood.

6 **(a)** The movement of molecules within an organism can occur by diffusion and active transport.

Complete Table 1.1 by placing ticks (✓) to show the correct features of each process.

Table 1.1

feature	active transport	diffusion
movement of particles always occurs across a cell membrane		
movement of molecules during gas exchange		
rate of movement of particles is higher when the concentration gradient is larger		
requires energy from respiration		

[4]

(b) Explain why active transport is important in root hair cells.

7 Water is an essential molecule for life.

(a) Complete the statements.

Water moves into and out of cells by ..... .

Water is known as a ..... because it can dissolve solutes.

[2]

(b) A leaf cell was put into a solution. The water potential of the solution was lower than the water potential of the contents of the cell.

Fig. 1.1 is a sketch of the cell after three hours in the solution.

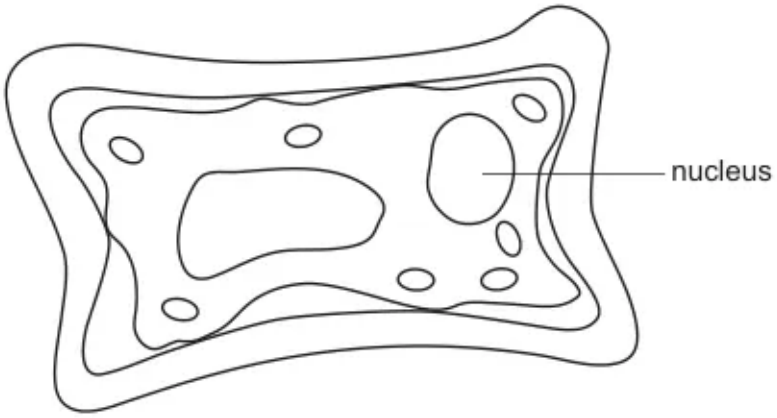

Fig. 1.1

The leaf cell was transferred into pure water.

Sketch the expected appearance of the cell after it had been in the pure water for three hours.

Draw **one** arrow on your sketch to show the direction of water movement.

[3]

(c) A plant was **not** watered for one week.

Fig. 1.2 shows a series of photographs of the plant during the week.

day 0 day 3 day 7

Fig. 1.2

Explain how the lack of water has affected the support of the leaves of the plant shown in Fig. 1.2.

Use the term *turgor pressure* in your answer.

8 Some students investigated osmosis in raw potato sticks.

(a) Define the term *osmosis*.

.....

.....

.....

.....

.....

.....

..... [3]

(b) The students measured the mass of four of the potato sticks using an electronic balance.

Fig. 4.1 shows an electronic balance.

Fig. 4.1

The students left each potato stick in one of four different liquids for 5 hours:

- distilled water
- 0.1 mol per dm^3 sodium chloride solution
- 0.5 mol per dm^3 sodium chloride solution
- 1.0 mol per dm^3 sodium chloride solution.

After 5 hours they measured the mass again and calculated the change in mass.

(i) Predict which of the liquids would cause the largest decrease in mass of a potato stick.

..... [1]

(ii) The students dried the potato sticks with paper towels before putting them on the electronic balance.

Suggest why.

.....

.....

..... [1]

(c) After the experiment the students noticed that the potato stick with the lowest mass was soft and floppy.

Explain why the potato stick had become soft and floppy.

.....

.....

.....

.....

.....

.....

..... [3]

(d) The students followed the same experimental procedure with boiled potato sticks and found no overall change in mass in any of the solutions.

Suggest why the mass of the boiled potato sticks remained the same.

Osmosis Click for more variations

9 *Rhabdostyla* is a single-celled organism that has no cell wall and no chlorophyll.

(a) Gases are exchanged across the cell membrane of *Rhabdostyla*.

Name:

the gas produced by *Rhabdostyla* .....

the process that produces the gas .....

the method of removal of the gas .....

[3]

Rhabdostyla lives in freshwater habitats, such as ponds, lakes and rivers.

Freshwater has a very low concentration of solutes.

Rhabdostyla has a contractile vacuole that fills with water and empties at intervals as shown in Fig. 4.1. The contractile vacuole removes excess water.

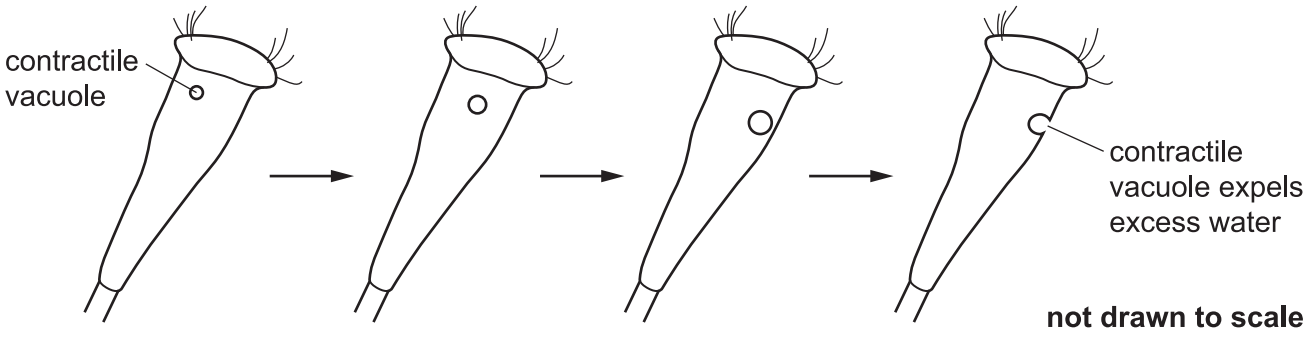

Fig. 4.1

(b) Explain, using the term **water potential**, why *Rhabdostyla* needs to remove excess water.

.....

.....

.....

.....

.....

.....

..... [3]

STEM | Exam Builder

In an investigation, individual *Rhabdostyla* were placed into different concentrations of sea water. The rate of water excreted by the contractile vacuole of each organism was determined. The results are shown in Fig. 4.2.

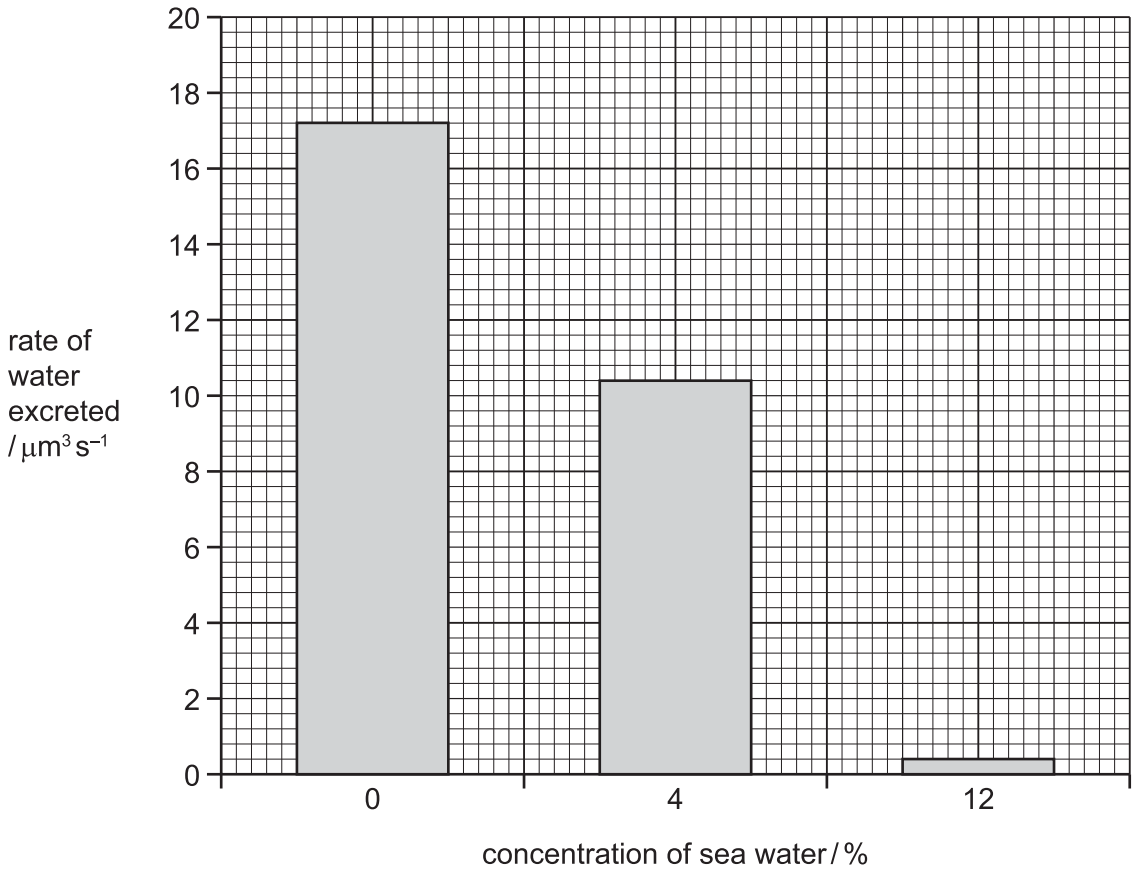

Fig. 4.2

(c) Explain the results shown in Fig. 4.2.

.....

.....

.....

.....

.....

.....

..... [3]

STEM | Exam Builder

(d) Single-celled organisms with cell walls do not have contractile vacuoles. Suggest why.

10 Fig. 1.1 shows the movement of particles through an epithelial cell in the small intestine.

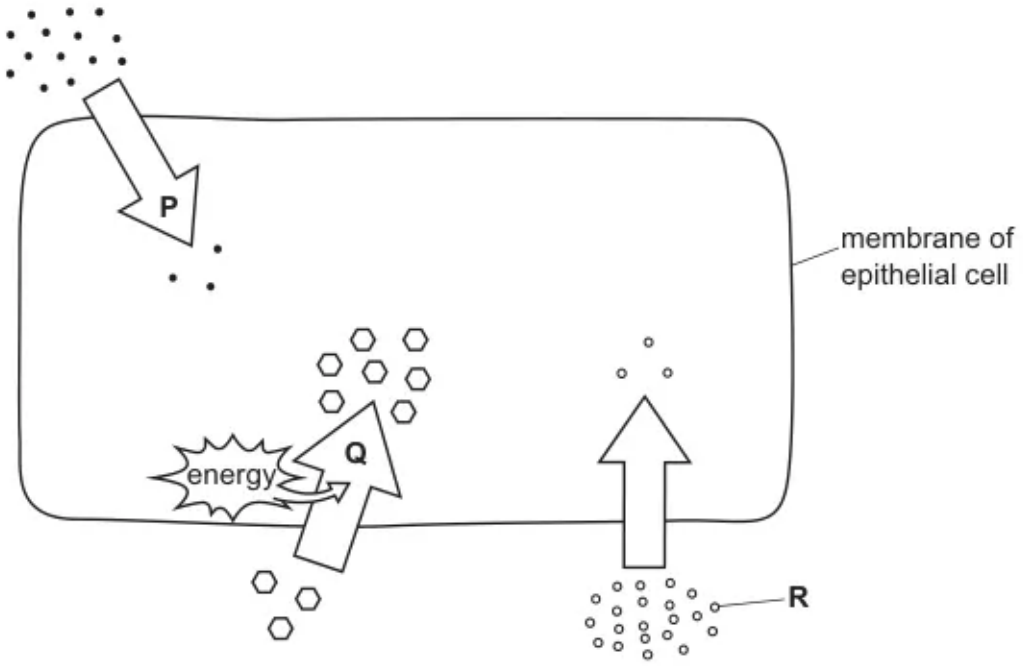

Fig. 1.1

(a) In Fig. 1.1, arrow **P** represents the diffusion of oxygen molecules.

(i) Describe what is meant by the term diffusion.

.....

.....

.....

.....

..... [2]

(ii) State the type of energy needed for diffusion.

..... [1]

(b) Carbon dioxide molecules also move by diffusion.

(i) State the name of the process in human cells that produces carbon dioxide.

..... [1]

(ii) On Fig. 1.1, draw an arrow to show the direction of diffusion of carbon dioxide molecules. [1]

(c) In Fig. 1.1, arrow **Q** represents another type of particle movement.

Identify the type of particle movement represented by arrow **Q**.

Explain your answer.

type of movement .....

explanation .....

.....

.....

[3]

(d) In Fig. 1.1, particle **R** moves from the lumen of the small intestine into the epithelial cell.

Suggest why particle **R cannot** be starch.
