Kinetic particle model

Time allowed: 1 hour 10 minutes

Subject code **0625**

Physics

Questions from Paper 3 and Paper 4

You must have: a ruler marked in centimetres and millimetres, a protractor, compasses, a pen, an HB pencil and an eraser.

Total marks

/ 72

Instructions

- Answer every question in the space provided on this paper.
- Write in black or dark blue ink. Pencil may be used for diagrams and graphs.
- Fill in your name, centre number and candidate number above.
- Show your working: a correct method can earn marks even if the answer is wrong.

Information

- This paper has 10 questions worth 72 marks in total.
- The marks for each question or part are shown in brackets, for example [3].

Advice

- Read every question through once before you write anything.
- Use the marks in brackets to judge how long to spend on each part.
- If you finish early, go back and check your working.

Print at 100% (Actual size) so diagrams keep their real measurements.

1 Fig. 6.1 shows a smoke cell. The smoke cell contains air molecules and smoke particles. A student views the motion of the smoke particles in the smoke cell by using a microscope.

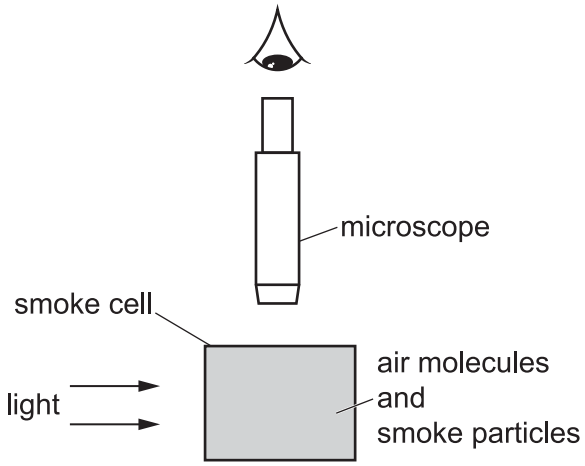

Fig. 6.1

Fig. 6.2 shows the path of one of the smoke particles.

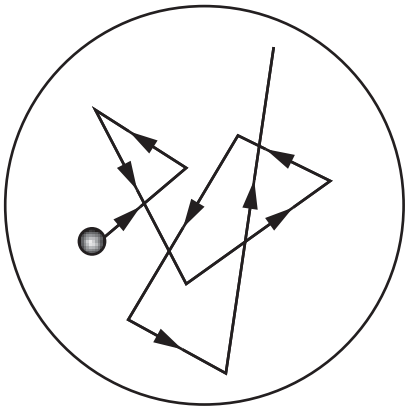

Fig. 6.2

(a) State the term used for the motion of the smoke particle.

..... [1]

(b) Explain the motion of the smoke particle in Fig. 6.2.

2 **(a)** The arrows on Fig. 5.1 represent changes of state.

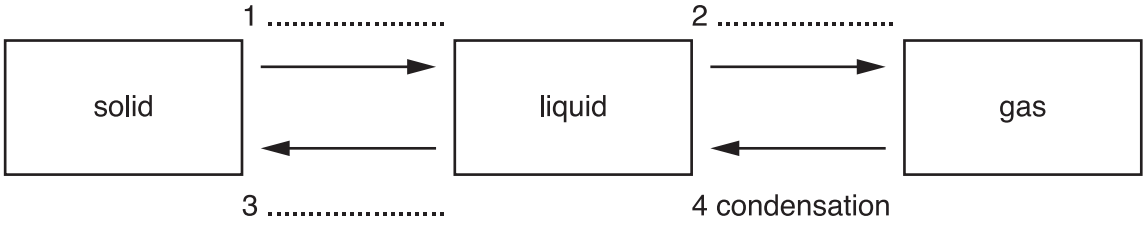

Fig. 5.1

One of the arrows is labelled. Label each of the other arrows with the correct change of state. Write the change of state on the dotted lines next to each arrow. [3]

(b) A beaker contains some liquid with a low boiling point. The beaker is placed onto a small amount of water, as shown in Fig. 5.2.

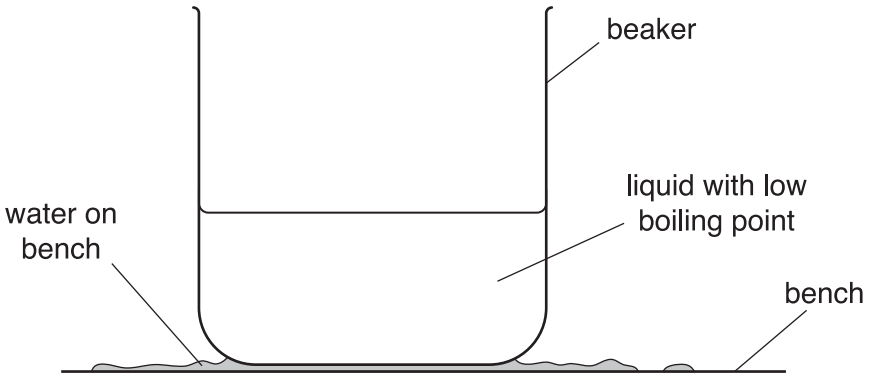

Fig. 5.2

The liquid in the beaker evaporates quickly. The water on the bench cools and turns to ice.

Explain why the water cools.

3 Fig. 4.1 shows some gas, at room temperature, in a cylinder with a piston that can move. The gas cannot escape from the cylinder.

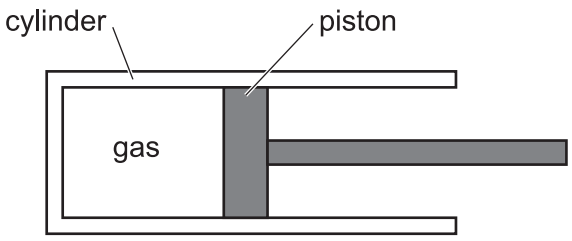

Fig. 4.1

(a) (i) Describe the movement of the gas particles.

.....

..... [2]

(ii) Describe how the gas particles exert a pressure on the walls of the cylinder and piston.

.....

..... [1]

(b) The piston in Fig. 4.1 moves to the left.
The volume of the gas decreases. The temperature of the gas does not change.
State and explain any change in the pressure of the gas when the piston moves to the left.

4 A teacher fills a copper can with solid wax and heats the can. She measures the temperature of the wax every minute. She continues heating once the wax has melted and stops heating when the wax is boiling.

(a) (i) State the term used for the process that transfers thermal energy through the copper.

..... [1]

(ii) Fig. 6.1 shows how the temperature of the wax changes as it is heated.

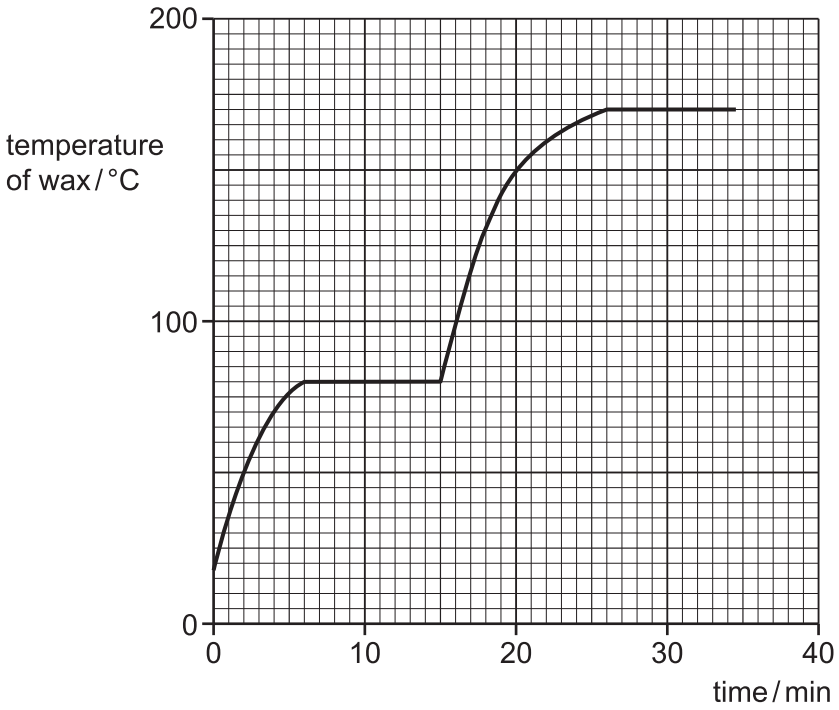

Fig. 6.1

Using the graph in Fig. 6.1, determine:

1. the melting point of the wax ..... °C [1]

2. the boiling point of the wax ..... °C [1]

3. the time at which the wax starts to boil. ..... min [1]

(b) Describe the molecular structure of the wax in terms of the arrangement, separation and motion of its molecules when it is a solid and when it is a gas.

6 A rubber balloon is inflated with helium and sealed so that no helium escapes.

The balloon is positioned immediately below the ceiling in a room.

Heaters are switched on and the temperature of the air in the room increases.

(a) When the heaters are first switched on, the temperature of the air immediately below the ceiling increases more quickly than the temperature of the air in the rest of the room.

Explain why this happens.

.....

.....

..... [2]

(b) The temperature of the helium in the balloon increases and as the rubber stretches, the volume occupied by the helium increases.

(i) State what happens to the motion of the helium particles as the temperature increases.

.....

..... [1]

(ii) As the rubber stretches and the volume of the helium increases, the pressure of the helium remains constant.

Explain, in terms of the particles of helium, how the pressure of the helium remains constant.

7 **(a)** **(i)** State two ways in which the molecular structure of a gas differs from the molecular structure of a liquid.

1. .....

2. .....
[2]

(ii) Compressibility is the ease with which a substance can be compressed.

State and explain, in terms of the forces between the molecules, how the compressibility of a gas differs from that of a liquid.

.....

.....

..... [2]

(b) Fig. 6.1 shows a weather balloon being inflated by helium from a cylinder.

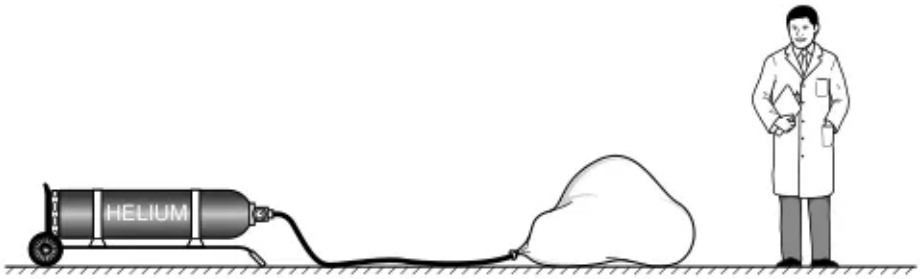

Fig. 6.1

(i) The helium that inflates the balloon had a volume of $0.035\,m^3$ at a pressure of $2.6 \times 10^6\,Pa$, inside the cylinder.

The pressure of the helium in the balloon is $1.0 \times 10^5\,Pa$ and its temperature is the same as it was when in the cylinder.

Calculate the volume occupied by the helium in the balloon.

volume = ... [3]

(ii) As the balloon rises up through the atmosphere, the temperature of the helium decreases.

State the effect of this temperature change on the helium molecules.

8 Fig. 3.1 shows gas trapped in the sealed end of a tube by a dense liquid.

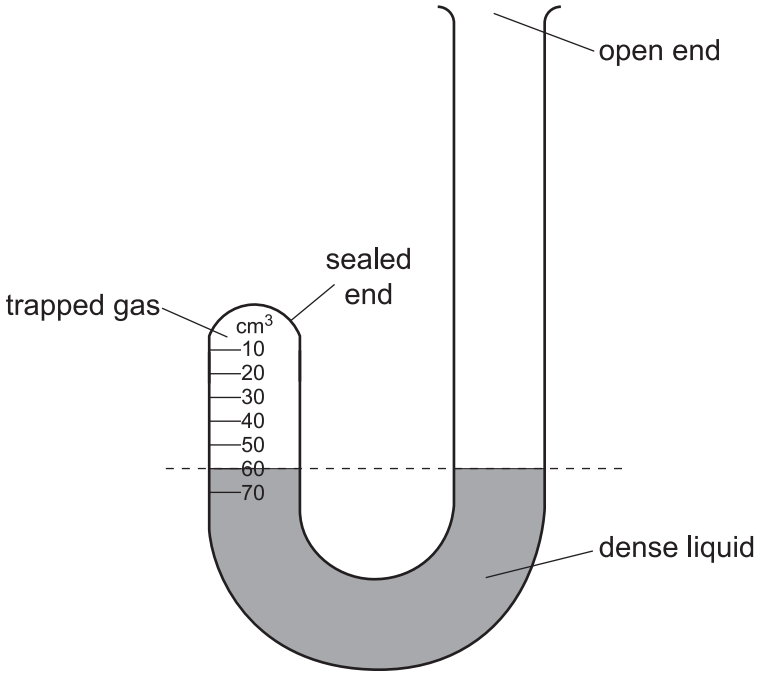

Fig. 3.1

The scale marked on the sealed end of the tube is calibrated to read the volume of gas trapped above the liquid surface. Fig. 3.1 shows that initially the volume V_1 of the gas is 60 cm^3.

The pressure of the atmosphere is 1.0×10^5 Pa.

(a) State how Fig. 3.1 shows that the pressure of the trapped gas is equal to the pressure of the atmosphere.

.....

..... [1]

(b) Explain, in terms of the momentum of its molecules, why the trapped gas exerts a pressure on the walls of the tube.

.....

.....

.....

..... [3]

STEM | Exam Builder

(c) More of the dense liquid is poured into the open end of the tube. The level of the liquid surface in both the sealed and the open ends of the tube rises as shown in Fig. 3.2. The temperature of the trapped gas and atmospheric pressure both remain constant.

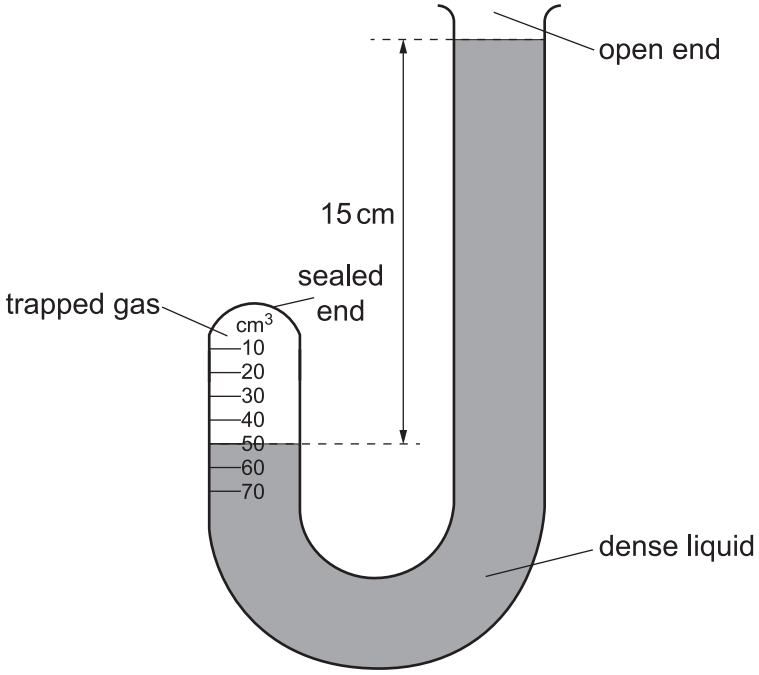

Fig. 3.2

(i) In the sealed end of the tube, the volume V_2 of the trapped gas is 50 cm^3. In the open end of the tube, the liquid surface is 15 cm above the new level in the sealed tube.

Calculate the pressure p_2 of the trapped gas.

pressure p_2 = ... [2]

(ii) Calculate the density of the liquid in the tube.

density = ... [2]
